Lochgelly Community Council Health and Environmental Investigation

June- August 2006

1. INTRODUCTION

- 1.1 Lochgelly Community Regeneration Forum and Lochgelly Community Council have been approached by a number of Lochgelly residents expressing concerns about health and environmental issues. The Regeneration and Community Council members have been responding to some of the concerns based on findings from previous investigations. However it was agreed that some additional work would be undertaken to assist with queries.

2. ENVIRONMENTAL CONCERNS

2.1 Noise from flaring

Noise – The Mosmorran & Braefoot Bay Independent Air Quality Monitoring Group is considering the request for tree planting to reduce noise levels.

2.2 Vibration from flaring

There was a report of damage to windows arising from the vibrations from Mosmorran. This problem is being addressed by the Mosmorran & Braefoot Bay Independent Air Quality Monitoring Group.

2.3 Environmental pollution

There are concerns that pollutants from the Mosmorran Plant may be giving rise to environmental pollution. The ongoing monitoring and reporting systems led by Professor Wilson Sibbett (Chair of the Mosmorran & Braefoot Bay Independent Air Quality Monitoring Review Group) report that emission levels from the plant are within National Air Quality Standards. In addition ongoing monitoring of air pollution levels in the local area show no abnormal levels.

3.0 HEALTH CONCERNS

3.1 *Cancer incidence*

Members of the public have raised concerns about a number of cancers arising in the area. We do not have information on the types of cancer, age groups affected, occupations, lifestyle factors for the individuals affected. These are all factors which contribute to the development of cancer so we cannot comment on the potential link between environmental factors and cancer development in these instances. Even if this information were available, it may still be difficult to prove a link between cancer and environmental issues in small areas such as at street level where very small numbers of people are involved.

We would be able to investigate an environmental or behavioral link if there was evidence of the same, or similar cancers occurring in a small area within a few years of each other. We do not have this evidence at present to undertake such an investigation. However, all cancer data is registered and if any unexpected trends appear they will be investigated.

Investigations in the past have shown no increased incidence of cancer in the Lochgelly area. Information shows that in the Lochgelly area the number of admissions to hospital with a diagnosis of cancer is slightly above the Scottish average. However the number of deaths from cancer is below the Scottish average suggesting we are seeing an earlier diagnosis but better outcome. This information is attached as Appendix 1.

3.2 *Asthma rates*

There is a view that the number of children suffering from asthma has increased in the area in recent years. Local GPs (General Practitioners) confirmed that they are not aware of any unusual increase in diagnosis. There may be a change in the management of children with asthma as a result of recent guidelines on treatment resulting in more attention given to managing symptoms.

The symptoms of asthma are made worse by passive smoking so it is important to look at how smoking and asthma may be related in the area. The estimated number of smokers in Lochgelly is above the national average. Lochgelly also has above average smoking during pregnancy and smoking related deaths. There is therefore, a considerable amount of work underway to support smokers in smoking cessation programmes (see Appendix 2).

3.3 *Metallic taste*

Some members of the public reported experiencing a metallic taste. We contacted Scottish Water about the possibility that this could arise from chlorination of the local water supplies. Scottish Water have informed us that no secondary chlorination is used at the two reservoirs in the area: - South Street Service Reservoir & Spion Kop Service Reservoir. In Lochgelly the water supply is from Glendevon WTW and there have been no major problems there. There have been no reports of network flow problems. The perception of taste varies between individuals so it may be that some people are more sensitive to changes in the chlorination levels than others.

4.0 **SUMMARY**

- 4.1 The purpose of this investigation was to consider a potential link between exposure to an environmental substances and possible ill health. This is often difficult to prove because many things affect health. Unfortunately it is more difficult to prove a link where there are many symptoms and many environmental exposures, as is the case in Lochgelly. This is because the more symptoms experienced, the more possible causes there may be.
- 4.2 In this case we cannot prove a direct link between a number of environmental concerns and a number of health problems. This does not mean that the concerns are not real – only that we cannot prove that environmental exposures have caused this range of problems.
- 4.3 In order to follow up any specific concerns it would be helpful if we could speak directly to members of the public who are raising concerns. In this way we can look at the range of environmental and lifestyle issues which might be possible sources of the problem and identify the most likely cause.

Dr Jackie Hyland

Consultant in Public Health Medicine NHS Fife

Mrs Lynne Campbell

Public Health practitioner, Dunfermline and West Fife Community Health Partnership

Mr Phil Mawhood

Team Leader, Fife Council Environmental Services

1. The graph shows the 'measure' (e.g. crude rate, percentage, years of life) expressed as a percentage below or above the Scottish measure, but using a range from a minimum of -70% to a maximum of +70% only. The actual percentage value is shown in bold to the right of the graph. This is calculated as the area 'measure' minus the Scottish measure, divided by Scottish measure and multiplied by 100.

2. Average annual numbers and rates.

3. Social Grade AB: higher & immediate managerial/professional occupations; Social Grade E: on state benefit, unemployed, lower grade workers

4. Employee numbers based on location of business, not residence area of employees.

5. Defined day cases. See detailed table of definitions/sources (available at www.healthboard.scot.nhs.uk/communityprofiles) for further details.

6. Crude rate per 100 population; cr2 - crude rate per 100,000 population; cr3 - crude rate per 1,000 live births; cr4 - crude rate per 1,000 resident population; cr - age-standardised rate per 100,000 population/yr - years; Defn - definition (see table of all data definitions and sources)

** Data presented at community (not postcode sector) level only.

n/a - not available - data may not be available for a number of reasons e.g. lack of complete national coverage, small population, or issues relating to wrongly used postcodes. In addition, where the number of cases for a particular indicator is '0', most crude rates or percentages will be marked 'n/a' for reasons of confidentiality.

† This indicates a warning that although the standardised rate is shown, it is based on very small numbers should therefore be interpreted with caution.

REPORT ON SMOKING CESSATION ACTIVITY IN LOCHGELLY BENARTY AREA

West Fife CHP offers a range of types of smoking cessation support to the people living in the communities of Lochgelly, Lochore, Crosshill and Ballingry. Having support along with the use of patches gum etc more than doubles the chances of successfully quitting. During support a person receives advice about planning a quit attempt, information about how to use patches etc, coping skills, CO monitoring and perhaps, most importantly, an opportunity to share the ups and downs of quitting with a person trained in smoking cessation.

There are different types of smoking cessation support and those that are available in this area are: Pharmacy, 1-1 in Medical Practices and Clinics, domiciliary and community support groups. This support is offered in different venues and at different times in an effort to suit different lifestyles.

Pharmacy support is easy to access and clients can drop-in during normal pharmacy opening hours and this would include a Saturday morning. Both Rosewell Pharmacy and A. Robertson & Sons Pharmacy offer support in Lochgelly. Rosewell Pharmacy provides this type of support in Lochore.

The local Public Health Nurses (Health Visitors) offer 1-1 support in Lochgelly and Benarty Medical Practices during normal surgery hours. These Practitioners have many years experience of giving smoking cessation support.

West Fife CHP appointed a Smoking Cessation Specialist in January 2006, whose role is to provide different forms of support in West Fife and to complement the existing services. He targets his work in communities which have the highest rates of smoking or where demand for smoking cessation support is greatest.

Ballingry, Lochore and Lochgelly South are amongst some of the most deprived areas in Scotland. A high level of deprivation in a community usually means that there are high rates of smoking.

The Specialist, along with a Nursing Colleague, currently runs a drop- in group in BRAG Business Centre, Crosshill at 6 p.m. on a Wednesday evening. This offers an informal and flexible means of getting support. The group format allows people the opportunity to share their quitting experiences and to benefit from each others support.

BRAG is a high quality venue whose staff have a community focus. It offers a safe, comfortable, friendly centre with good well lit parking facilities. Its location is ideally situated to serve the communities of Lochgelly, Crosshill, Ballingry and Lochore.

The Specialist also offers domiciliary support to clients who have difficulty attending Community or Practice based support. He is planning to start a 1-1 clinic in Benarty Practice in late July 2006 when the extension to the Medical Practice has been completed.

Some work is undertaken in schools with teaching staff and school nurses to raise awareness regarding tobacco issues and further work is being developed to consider how to support young people who have started smoking how to quit. An increase in the range of work is expected around a range of health issues with all schools in Scotland as they have been set the target of becoming a health promoting schools by 2007. This involves a whole school approach to promoting the physical, social, spiritual, mental and emotional well-being of all pupils and staff.

Support for women who are pregnant and smoke is available from two Midwife Smoking Cessation Specialists who have been employed to assist women following referrals through routine antenatal care e.g. hospital and GP appointments to stop smoking. In addition there is a Midwife (Starting Well) who works with other professionals in the area to offer intensive support on a wide range of issues to women including smoking. Both of these projects have strong links with local staff who are providing smoking cessation advice and support.
